

112A Introduction to Computer and Computer Science

Homework Assignment #1

Due: 9/25 12:00:00

In this homework assignment, you will solve a mathematical problem via basic python programming skills as you have learned all the related knowledge during the lectures (if, while, and for).

Problem #1: Prime number

Please write a python program to find the 9487th prime number.

Here is the sample code,

```
print("Homework 1")
print("="*60)

print("Problem 1: Please find the 9487th prime number")

# 自己想

print("="*60)

print("End of this homework.")
```

If everything goes well, you might get the result as shown below.

```
Homework 1
=====
Problem 1: Please find the 9487th prime number
      Ans: The 9487th prime number is 98849
=====
End of this homework.
```

Hand in procedure:

As we had mentioned in the lecture, you should list all your collaborators in your programs. Here is the template:

```
"""
Created on Sun Aug 7 01:23:45 2023

@author: Xi Winnie, student ID

@collaborators: EE Tsai, her student ID
"""
```

Please save your homework as a “.py” file, where the file name should follow this format:

112A_hw1_**ID**.py

For example,

112A_**hw1**_0123456789.py

Please note. **We are not going to accept any homework file with wrong file name, wrong file format, or without signature.** Please double check the content of your file.

Once you have accomplished your works, you can submit your homework to the “E3@NYCU” system. There will be a section for uploading your homework.
